Dear Terry

As you know MScience has been using your products Lanolin Liquid Gold , Hulltreat marine wax anti-foul , Bio-A , and E-Clean for many years now. MScience has been using these products for the purpose of bio-foul reduction in several different locations in north-west of Western Australia, where some of the most extreme occurrences of marine growth exist.

MScience has been applying the anti-foul to submersible water quality instrumentation and the reduction in bio-fouling on this instrumentation is beneficial in;

- Maintaining the highest levels of data quality and data recovery,
- Enabling increased deployment periods, and
- Reducing the time taken to clean instrumentation.

This in turn enables MScience to deliver results to its clients in an efficient and cost effective manner.

Not only do you provide an environmentally friendly product that stands up to our expectations, but your dynamic ability to adapt to our needs and develop a product specifically suited to the environment we are using it in is most impressive. Over the years we have been providing you with information of our experiences with the anti-foul and as a result you have been constantly improving it.

We have been pleased to do business with your company and look forward to what future developments you bring.

Kind regards

Nick Glorie
Marine Scientist
